

Abstract

An album sheet includes a binding edge and an opposite, outside edge. A film is attached to the sheet and extends along at least a portion of the opposite, outside edge. The film can be wrapped around the outside edge so that a portion of the film is on each side of the sheet. The sheet can include a mounting strip and a flexible film strip connecting the mounting strip to the binding edge of the sheet such that there is a gap between the mounting strip and the sheet. The flexible film strip can be wrapped around an outer, spine edge of the mounting strip. A plastic overlay can be attached to one edge of the sheet and dimensioned to cover at least a portion of the sheet.
